

The Mini Flexilight, 3/8" in diameter and rated at 20,000 hours, is becoming the most popular rope light because of its smaller diameter. This design has become possible through a restructuring of wires and light bulbs inside the rope light. Therefore, the quality and life of the product has remained as high as the standard 1/2" rope light.

The exclusive use of the highest-quality PVC material along with UV additives makes this product suitable for both indoor and outdoor applications, and protects it against very hot and cold weather. Flashing light effects can be created if a controller is used. The Mini Flexilight is suitable for making complicated patterns and designs with acute angles and dense lines. Its flexibility also makes it perfect for making smaller designs, such as portable signs and small home decorations.
